

## **Board of Trustees**

Doug Galiardi, Chairman  
Beth Breyfogle, Vice Chairman  
Dan Mefford, Treasurer  
Thomas Flynn, Vice Treasurer  
Bob Powelson, Secretary

Public participation and comments are encouraged at Board Meetings which are held at the District office, at 6:30 pm on the first and third Thursday of each month.

Please contact Tony Gardner, Superintendent, Jefferson Water and Sewer District, (614) 864-0749 Ext 210, if you need additional information on your drinking water.

The EPA approved the District to operate a public water system under License #OH-2504012. In 2018, Jefferson Water and Sewer District (JWSD) had an unconditioned license to operate our water system.

Robert Stewart, Director

## **Drinking Water Consumer Confidence Report for 2018**

Jefferson Water and Sewer District has prepared the following report to provide information to you, the consumer, on the quality of our drinking water. Included within this report is general health information, water quality test results, how to participate in decisions concerning your drinking water, and water system contacts. Your drinking water has met all Ohio EPA standards.

**We are in the business of serving our customers and providing them with updated information about their water and sewer services**

**What is the source of your drinking water?** Jefferson Water and Sewer District receives its drinking water from three groundwater supply wells located adjacent to the treatment plant site on Taylor Road and two ground supply wells located at the Wengert Road wellfield. A Wellhead Protection Plan has been developed by the District that details the susceptibility of the District's source water and the potential sources of contamination in the adjacent area.

For emergency purposes, such as line breaks, fires, droughts, etc., the District can receive potable water from a connection with Southwest Licking Community Water and Sewer District or the City of Columbus. During 2018 we had four occurrences where we used water from SWLCWSD for a total of 2,058,830 gallons. We did not use any water from the City of Columbus.

#### **Source water assessment information:**

The State of Ohio provided an assessment of our source water in 2005. It was determined that the aquifer supplying drinking water to JWSD has a high susceptibility to contamination. This conclusion is based on the presence of a moderately thin protective layer of clay and silt, and there are several sources of contamination within the protection areas of both well fields. There is no evidence to suggest that ground water has been impacted by any significant levels of chemical contaminants from human activities or the presence of significant potential contaminant sources in the protected area. A copy of the Wellhead Protection Plan may be examined at the District's office at 6455 Taylor Road, or you may contact Tony Gardner, Superintendent, at (614) 864-0749 Ext 210, if you like more information about the assessment.

**What are sources of contamination to drinking water?** The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include: (A) Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; (B) Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, and mining, or farming;

In order to ensure that tap water is safe to drink USEPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health regulations.

(C) Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; (D) Organic chemical contaminants, including synthetic and volatile organic chemicals which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; (E) Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Federal Environmental Protection Agency's Safe Drinking Water Hotline (1-800-426-4791).

#### **About your drinking water:**

The EPA requires regular sampling to ensure drinking water safety. Jefferson Water and Sewer District conducted sampling for bacteria, nitrates, arsenic, disinfection by-products, volatile organic chemicals, radiological contaminants, as well as lead and copper during 2018 to comply with the standards set by the EPA. Samples were collected for various contaminants, most of which were not detected in Jefferson Water and Sewer District water supply. The Ohio EPA also requires Jefferson Water and Sewer District to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.

Jefferson Water and Sewer District received a monitoring violation for failure to collect samples of Disinfection By-Products for the 3<sup>rd</sup> quarter of 2018. Only one of the two samples required for the period was collected. The District collected and submitted the second sample to the Ohio EPA in the month of November 2018.

**Who needs to take special precautions?** Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infection. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

**Lead and drinking water:**

If present, elevated levels of lead can cause serious health problems especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing.

Jefferson Water and Sewer District is responsible for providing high quality drinking water, however, cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at <http://www.epa.gov/safewater/lead>.

**Revised Total Coliform Rule (RTCR) information:**

All water systems were required to begin compliance with a new rule, the Revised Total Coliform Rule, on April 1, 2016. The new rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of total coliform bacteria, which includes E. coli bacteria. The USEPA anticipates greater public health protection under the new rule as it requires water systems that are vulnerable to microbial contamination to identify and fix problems. As a result, under the new rule there is no longer a maximum contaminant level violation for multiple total coliform detections. Instead, the new rule requires water systems that exceed a specified frequency of total coliform occurrences to conduct an assessment to determine if any significant deficiencies exist. If found, these must be corrected by the Public Water System.

**How do I participate in decisions concerning my drinking water?** Public participation and comments are encouraged at regular meetings of Jefferson Water and Sewer District, which begins at 6:30 pm on the first and third Thursday of each month.

Gallons pumped in 2018 = 304.1 million

**EPA SAFE DRINKING WATER HOTLINE**  
1-800-426-4791

**Definitions of terms contained within this report:**

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water listed below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Contaminant Level (MCL):** The highest level of contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Residual Disinfect Level (MRDL):** The highest residual disinfectant level allowed.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of residual disinfectant below which there is no known or expected risk to health.

**Parts per million (ppm) or milligrams per liter (mg/L):** Units of measure for concentration of a contaminant. A part per million corresponds to one second in a little over 11.5 days.

**Parts per billion (ppb) or micrograms per Liter (µg/L):** Units of measure for concentration of a contaminant. A part per billion corresponds to one second in 31.7 years.

**Picocuries per liter (pCi/L):** A common measure of radioactivity.

**Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements a water system must follow.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

Contaminants	MCLG	MCL	Over Action Level	Level Found	Range of Detections	Violation	Sample Year	Typical Source of Contaminants
<b>RADIOACTIVE CONTAMINANTS</b>								
Alpha emitters (pCi/L)	0	15		5.4	5.4	No	2017	Erosion of natural deposits.
<b>INORGANIC CONTAMINANTS</b>								
Barium (ppm)	2	2		0.027	0.027	No	2014	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride (ppm)	4	4		0.8	0.48 - 1.21	No	2018	Erosion of natural deposits; Water additive that promotes strong teeth; Discharge from fertilizer and chemical factories.
Mercury [inorganic] (ppb)	2	2		0.5	0.5	No	2017	Erosion of natural deposits; Discharge from refineries and factories; Runoff from landfills; Runoff from crop land.
Nitrate (ppm)	10	10		0.32	0.38	No	2018	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
<b>RESIDUAL DISINFECTANTS</b>								
Total Chlorine (ppm)	MRDL = 4.0	MRDLG = 4.0		0.8	0.42 - 1.29	No	2018	Water additive used to control microbes.
<b>DISINFECTION BY-PRODUCTS</b>								
Total Trihalomethane (ppb)	0	80		54	36.0-54.0	Yes	2018	By-product of disinfection. Violation given for late sample.
Haloacetic Acids (ppb)	0	60		6.0	1.0 - 6.0	Yes	2018	By-product of disinfection. Violation given for late sample.
<b>DISINFECTION BY-PRODUCTS</b>								
Lead (ppb)	0	AL = 15.0	0/20	5.0	5.0	Yes	2018	Corrosion of household plumbing systems; Erosion of natural deposits. <i>Violation given for late sample.</i>
Copper (ppm)	1.3	AL = 1.300	0/20	0.259	0.050 - 0.345	Yes	2018	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives. <i>Violation given for late sample.</i>

## DRINKING WATER NOTICE

### 2018 Monitoring requirements were not met for JEFFERSON WATER AND SEWER DISTRICT (JWSD) PWS ID 2504012

*We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether our drinking water meets health standards. During the 3<sup>rd</sup> Quarter of 2018 time period we did not monitor for the following contaminants and therefore cannot be sure of the quality of our drinking water during that time: DISINFECTION BY-PRODUCTS.*

#### What Should I Do?

This notice is to inform you that Jefferson Water and Sewer District PWS 2504012 did not monitor and report results for the presence of the contaminants listed above in the public drinking water system during the 3<sup>rd</sup> Quarter of 2018 time period, as required by the Ohio Environmental Protection Agency. You do not need to take any actions in response to this notice.

#### What Is Being Done?

Upon being notified of this violation, JWSD was required to have the drinking water analyzed for the above-mentioned parameters. The water supplier will take steps to ensure that adequate monitoring will be performed in the future.

A sample was collected and submitted to the EPA in November of 2018

Sample results and additional information may be obtained by contacting Jefferson Water and Sewer District.

Contact Person: Antony Gardner, Superintendent  
Phone Number: 614-864-0740  
Mailing Address: 6455 Taylor Rd. Blacklick, OH 43004

*Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.*
